In the claims:

1. (Amended) A method for treating a bone defect, comprising:  
identifying a bone site suitable for receiving an implant; and  
introducing a strongly resorbable, synthetic poorly crystalline apatitic calcium phosphate  
at the implant site, whereby the implanted poorly crystalline apatitic calcium phosphate is  
resorbed and bone is formed at the implant site.

2. A method for treating a bone defect, comprising:  
identifying a bone site suitable for receiving an implant; and  
introducing a hydrated precursor [to a strongly resorbable, poorly crystalline apatitic  
calcium phosphate] at the implant site, the hydrated precursor comprising an amorphous  
calcium phosphate and a promoter,  
whereby the hydrated precursor is converted in vivo at the implant site to a hardened  
poorly crystalline apatitic calcium phosphate and whereby bone is formed at the implant site.
